

ChartWorks

ChartWorks is a software based charting program designed to standardize physiotherapy programs and increase efficiency and quality of patient care for Long Term Care facilities, Retirement homes and Community Care Access Centres (CCAC) providers. The program runs on a laptop computer which is taken with the physiotherapist when they assess and treat patients. The data from the laptop is downloaded onto the facility computer system so that all registered staff have real time access to the physiotherapy program.

Benefits

- ◆ Improves Quality of Patient Care
- ◆ Improves the quality of physiotherapist notes
- ◆ Provides fast access and quick review of ALL physiotherapy patient charts and notes
- ◆ Allows integration of best practice guidelines into physiotherapy treatment plans
- ◆ Improves communication between physiotherapy staff and registered staff

Reduces Costs and Expenses

- ◆ Reduces photocopying costs
- ◆ Reduces paper storage costs
- ◆ Reduces duplication of charting

Reduces Risks

- ◆ Computer prompted questions ensure that the user records all necessary information
- ◆ Insures Ministry, OHIP, and College of Physiotherapists charting compliance

Increases Physiotherapist Productivity

- ◆ The physiotherapist is able to collect more objective data without reducing productivity
- ◆ Faster documentation allows the physiotherapist to see or spend more time with residents

Standardized Assessments

- ◆ All assessment and re-assessment forms are standardized to help the user collect all mandatory health information

Outcome Measures

- ◆ Standardized outcome measures allow the user to easily implement outcome measures into their assessment process.
- ◆ Charting on the laptop computer allows the therapist to use and score the outcome measure while they are seeing the patient. The computer automatically interprets the test scores, providing the therapist and facility with objective assessment data on each resident for the following scales: Timed up and Go, Berg Balance Test, Tenetti, Continuing Care Activity Measure, and Two Minute Walk Test.

Chartworks

Reporting

The program generates and prints the following customized reports:

- ◆ Assessment data, goals, outcome measures and treatment plans
- ◆ Quarterly Reviews of resident's participation and progress
- ◆ Daily treatment notes
- ◆ Discharge reports for facility staff, family and physicians
- ◆ Patient education handouts

Security

- ◆ Controlled access to protected health information through unique user access levels and password controls
- ◆ Chart audit reports with complete documentation of all users that have documented each patient encounter

Objective Results Tracking

- ◆ The use of outcome based performance measures and Goal Performance Scaling allows the therapist and the facility to objectively track patient and program progress

Patient Historical Data

- ◆ Provides all staff access to an easy to understand historical record of each residents involvement with the physiotherapy program

Physio To Do List

- ◆ Prompts the Physiotherapist and therapy staff to keep up to date with re-assessments, and quarterly reviews

Clinical Practice Guidelines and Best Practice Treatment Plans for your Clients

- ◆ Clinical Practice Guidelines (CPG) eliminates guess work and allows the user to implement best practice protocols into every treatment plan (i.e. Fall Prevention Protocol, Hip and Knee Osteoarthritis CPG, Post Hip & Shoulder Surgery CPG, etc.)
- ◆ Clinical decision pathways are provided for the therapist (based on assessment data) to ensure that evidence based treatment protocol options are available for each residents physiotherapy care plan
